

## Alpha Release – The Dollar Cost of Crony Capitalism

### Overview:

So far, most of the data has been sourced, with the exception of foreign data for the comparative bar chart. I believe I will be changing the histogram of incomes to a Bubble chart, as I will be able to showcase the data more densely, and I have plans on animating the chart since I now have data from 1991 – 2020.

### Completed Features:

See below, but the summary is I have completed the Bubble Chart for 1991 and 2020, to show the disparity between the two years.

### Upcoming Immediate Milestones:

I will likely finish gathering foreign data by Wednesday, November 10, and the viz element associated with the data will not be far behind.

### Roadblocks:

I was out of state recently. As a result, data collection and processing is delayed by a few days.

### Data Visualization Elements:
